

astonian solid surface free standing bath

The astonian solid surface bath has been specially manufactured using 100% recyclable plant-based materials in place of fossil resins. This creates a smooth surface pleasant to the touch, with natural beauty similar to stone that can also preserve water heat 12 times longer than conventional materials, this also results in the bath becoming 30% lighter than standard solid surface. A modern style, seamless, one piece bath with 'soft touch' effect, acoustic reduction of water noise, resistance to impact and chemical damages with non-porous self-cleaning properties this bath really is the new way forward for a modern design bath using modern materials.
